

PROTOCOL FOR BARRI-CARE® USE IN TRADITIONAL & COSMETIC TATTOO PROCEDURES

BARRI-CARE® will replace all Vaseline® and/or A&D® products used within the traditional and cosmetic tattoo industries. **BARRI-CARE®** is a superior product of the highest grade petroleum base (30), whereas other petroleum-based products' are of a much lower grade and are meant only to be placed topically on the skin and not placed into the skin, as done in a tattoo procedure. **BARRI-CARE®** will not melt down leaving a ring around it due to the high quality of petroleum used as its base.

BARRI-CARE® IS ANTIMICROBIAL AND EFFECTIVE AGAINST MRSA. The product can be used during the tattoo procedure and for client aftercare following the procedure.

The exact protocol for **BARRI-CARE®** use in tattoo procedures is outlined below:

DURING THE TATTOO PROCEDURE

- ⊕ You will only need to use 1/3 the amount of **BARRI-CARE®** compared with what is used with other petroleum-based products.
- ⊕ Apply **BARRI-CARE®** just as you would A&D® or VASELINE® products but use 2/3 less
- ⊕ Tattoo as usual
- ⊕ **For Cosmetic Tattooing:** only use **BARRI-CARE®** on eyebrows and lips - **do not use for eyeliner!**
- ⊕ **If using BARRI-CARE® INDIVIDUAL PILLOW PACK:** open pack use ½ of pack for tattoo procedure.
- ⊕ **IF USING BARRI-CARE® TUBE:** place quarter size amount on field, replace lid and store away from any contamination.
- ⊕ **IF USING BARRI-CARE® JAR:** open lid, always use a **sterile** tongue blade/tongue depressor to remove product from the container. This will keep the container as clean as possible. Replace the lid as soon as product is removed.
- ⊕ Always handle **BARRI-CARE®** container with clean gloves.
- ⊕ Always store **BARRI-CARE®** in an area away from the immediate tattoo procedure area, such as on a clean shelf or in a clean drawer.

POST-PROCEDURE

- ⊕ At the end of the tattoo procedure, thoroughly cleanse the area with *rinse water**
⊕ apply a thin coat of **BARRI-CARE®** to the tattoo
- ⊕ Apply an appropriate bandage, such as sterile Telfa® or Dri-Loc® pad
- ⊕ Refer to your state and local laws for acceptable post-procedure tattoo dressings

AFTER CARE

The exact protocol for **BARRI-CARE®** use as tattoo aftercare is outlined below:

- ⊕ Instruct client to thoroughly wash hands first with **SATIN®** soap
- ⊕ Then wash tattoo and surrounding area with **SATIN®** soap and pat dry
- ⊕ Apply a thin coat of **BARRI-CARE®**
- ⊕ Reapply a thin coat of **BARRI-CARE®** when tattoo becomes dry
- ⊕ Do not apply **BARRI-CARE®** more than 3 times a day

* RINSE WATER

- ⊕ Mix 4-6 pumps (approximately 2 ounces) of **TECHNI-CARE®** with approximately 16 ounces of **sterile or steam distilled water**. (16 ounces is the approximate size of an average Nalgene® bottle)
- ⊕ Change Rinse Water every 48 hours
