

TECHNI-CARE[®] ANTISEPTIC SKIN PREP PROTOCOL FOR BODY PIERCING

Using **Techni-Care[®]** Antiseptic to clean and prepare skin for piercing:

1. Squirt one pump – (approximately 2.5ml) of **Techni-Care[®]** onto sterile gauze or 4x4.
2. Fold gauze/4x4 in half and gently rub both sides together to create a foam.
3. Unfold gauze.
4. Clean skin by applying **Techni-Care[®]** to center of area being cleaned and wipe in one consistent, outward circular motion.
5. Use the opposite side of the gauze to repeat the same motion. This should not be an attempt to remove the **Techni-Care[®]**.
6. Prepare the skin for piercing by unfolding gauze/4x4 and using the inside to repeat the exact same two actions.
7. Wait 30 seconds.
8. With a new sterile piece of gauze/4x4, remove **Techni-Care[®]** by wiping from the center of area in one consistent outward circular motion. If necessary, use opposite side of gauze/4x4 to repeat action and remove **Techni-Care[®]**.
